Information for Developers

Bond Wireless is a leading wireless innovations company providing award winning mobile and wireless technology solutions, Wireless Application Services, Technology Products and Consultancy Services to developers worldwide. Bond Wireless provides international connectivity, supplying access to a range of Short Message Service (SMS/Text Messaging) carrier grade gateways with two-way text messaging capability that covers over 150 countries and 500 network operators and carriers. As a wireless application service provider, Bond Wireless can enable developers to harness the power of wireless technology to improve the functionality of their products.

BW SMS GATEWAY (XML WEB SERVICE)

The Bond Wireless SMS Gateway is the entry point into the Bond Wireless global SMS network. It is an enabling technology that permits developers to access the global SMS network without having to open network ports. Communication is done over HTTP or HTTPS using XML, from just about any programming language of the developer's choice.

Our Gateway gives the ability to incorporate SMS into specific programs/applications (including legacy systems) without resorting to web-based solutions or complicated third party plug-ins. Using our SOAP Gateway eliminates the privacy and security issues of having contacts stored in a third party database. Users of our SMS Gateway will have access to their account details in real time via the Bond Wireless web site.

Bond Wireless operates a reliable, multi-site system to which customers connect. All sites are operate on redundant high speed internet connections to allow large volumes of SMS to over 500 mobile networks globally. For further information about gaining access to the BW SMS Gateway using XML please contact a member from our Technical Department.

Other Bond Wireless tools for developers:

- Email-to-SMS and SMS-to-Email
- SMS Reply (two-way messaging)
- Premium SMS

CONSULTANCY

Bond Wireless has recruited a core team of wireless and mobile technology specialists that form the Bond Wireless expert mobile and wireless professional consultancy services. Bond Wireless has been actively engaged with a number of Business, Corporate and Government clients supplying advice on industry mobile and wireless solutions. We have proven ourselves internationally by winning the International Asia-Pacific ICT award for Communications Applications in 2002 and have been formally recognized by Microsoft as a Certified Partner.
